

Update of NorFor Feed Rationer Optimizer

Start by uninstalling NorFor Feed Rationer Optimizer (NFRO) and then install a new version of NFRO.

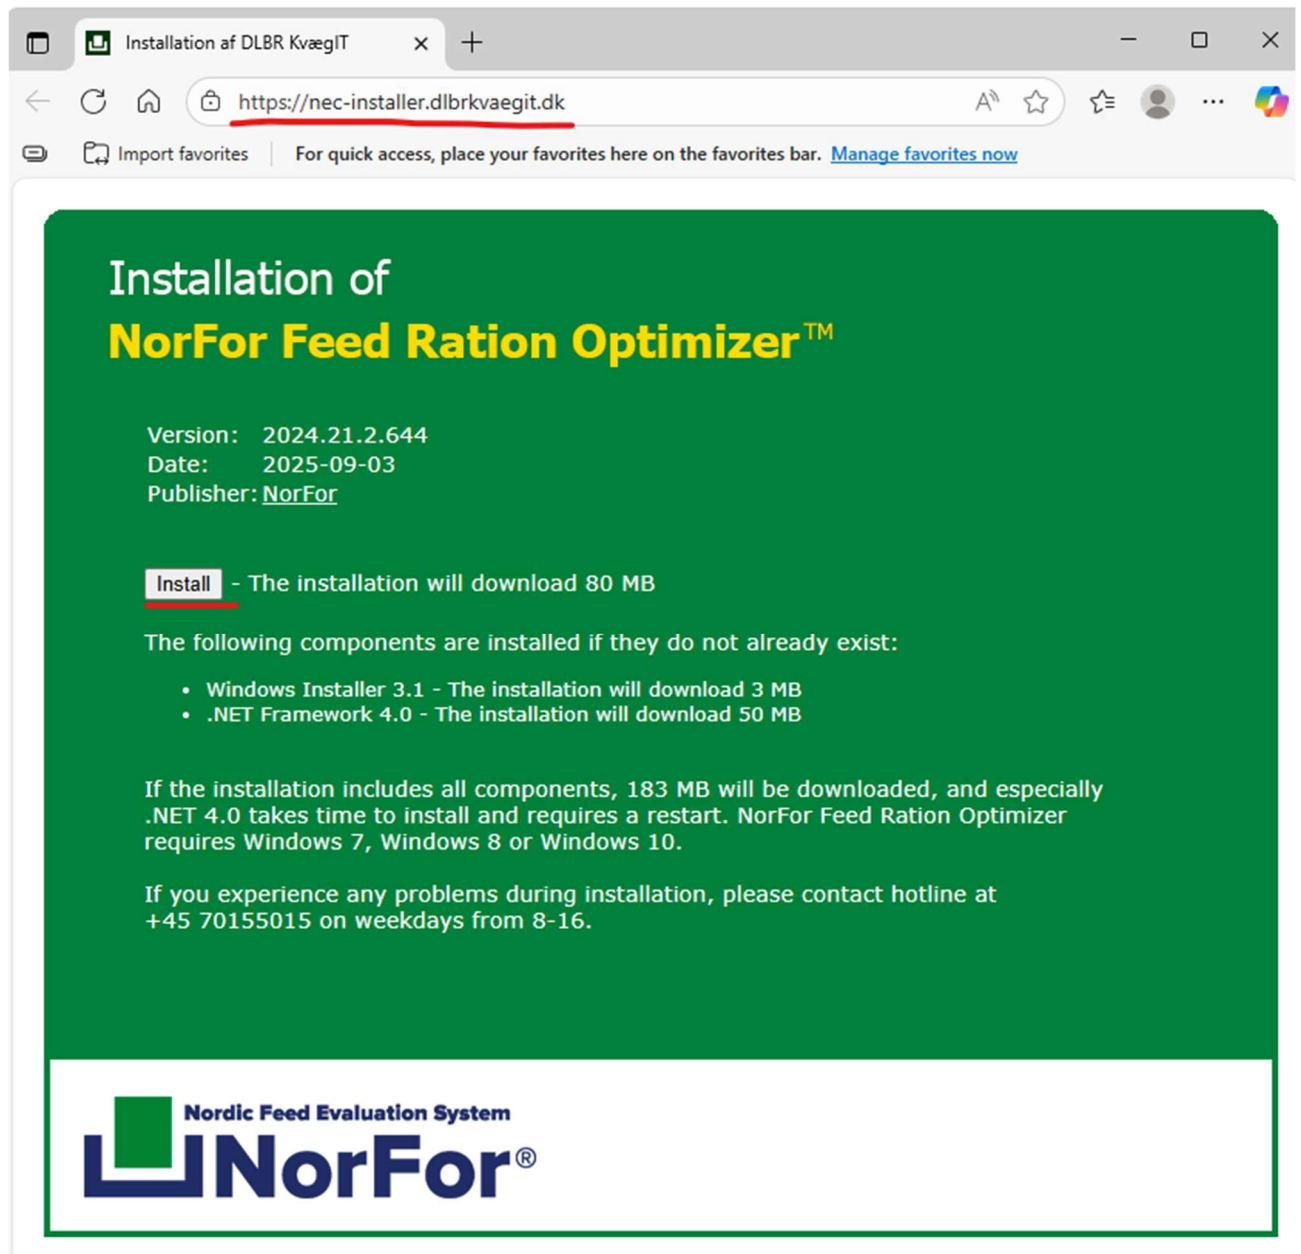

1. Open "Settings", the keyboard combination <windows key> + I can be used or type "settings" in the start menu
2. In the left pane, choose "apps" and then choose "Apps & features"

3. In the App list search box, type "norfor"
4. When the application is found, mouse-click on the three dots to the right and click on "Uninstall". If the application is not found, proceed to the next step.

5. After the application has been uninstalled, open a browser and go to the installation page: <https://nec-installer.dlbrkvaegit.dk/> and click the "Install" button. This will initiate download of the setup.exe installation file, which is saved to the "Downloads" folder on the PC.

6. Click “Open file” and setup.exe will start the installation.

Installation can also be initiated by opening Windows File Explorer using keyboard command <windows key> + E, and then in the “Downloads” folder double-click on setup.exe.
